

# PLASTIC SEPARATOR SHEETS

Plastic separator sheets are used in industry to provide separation between different layers during palletization and storage. They are designed to be a reusable substitute for single use corrugated cardboard sheets. These sheets can be manufactured in thicknesses of 2 mm to 8 mm depending on the nature of use.

Advantages of

## PLASTIC SEPARATOR SHEETS

### Cost Effective

The reusable nature ensures the sheets are more cost effective in the long run

### Durable

Excellent combination of stiffness and impact resistance

### Water Proof

Ensures the sheets maintain their integrity when exposed to high moisture conditions

### Strong

Do not collapse or deform when a load is applied

# STEEL

## REINFORCED

# PLASTIC

## PALLETS

Green Earth plastic pallet is reinforced with steel pipes giving it the tensile and flexural strength, durability and impact resistance of steel and the finish and cleanliness of plastic.

An interconnected web of steel gives it excellent load and impact distribution properties. Impact or load at any certain point is distributed evenly over the entire pallet and absorbed by the steel reinforcement providing excellent impact resistance and load bearing capacity allowing for a longer life than conventional plastic pallets.

## Advantages Over injection molded **PLASTIC PALLETS**

### **SAVES OUR FOREIGN EXCHANGE RESERVES**

Contribute 100% to our local economy instead of depleting our country's foreign exchange reserve as a result of import of plastic raw material

### **COST EFFECTIVE**

Result in a significant immediate and longer term cost advantage as it is both cheaper and longer lasting than an injection molded plastic pallet

### **REINFORCED**

Exponentially increases the strength of the pallet

### **100% RECYCLED**

Can be manufactured from in-house plastic waste

### **MADE IN PAKISTAN**

## Advantages Over **WOODEN PALLETS**

### **NO SCREWS, SPLINTERING, SPLITTING OR ROTTING**

Protects valuable raw material

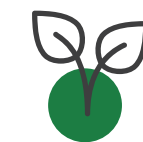

### **ANTI FUNGAL, ANTI TERMITE, WASHABLE**

Maintains a clean and safe environment

### **CHEMICAL RESISTANT**

Impervious to acids, alkalis, oils and other chemicals

### **ENVIRONMENTALLY FRIENDLY**

Protect our dwindling forest reserves

### **CHEAPER**

Long life ultimately results in a cheaper pallet in the long run
